

Data collected and combined into a csv file, to be loaded into an R dataframe.

Dataframe Columns:

- 1) **id:** a unique, anonymized string ID generated by ANONYMIZED referring to an individual attendee
- 2) **regionId:** a unique, anonymized string ID generated by ANONYMIZED referring to an event location
- 3) **startsAt:** a string representation of the date of an event
- 4) **gender:** voluntarily self-reported by attendee (male, female, nonBinary, unknown)
- 5) **ethnicity:** voluntarily self-reported by attendee (black, white, asian, latinx, other, unknown)
- 6) **codingInterest:** voluntarily self-reported by attendee (more, low, none, unknown)
- 7) **presented:** voluntarily self-reported by attendee (yes, no, unknown)
- 8) **newRegionId:** integer in range 0-27, assigned by researchers to replace the 28 original unique regionId string identifiers
- 9) **newEventId:** integer in range 0-6, assigned by researchers to replace the 7 original unique eventID string identifiers (dates)
- 10) **outcome:** voluntarily self-reported persistence in coding by attendee, via follow-up survey (yes, no, unknown)
- 11) **my_gender:** calculated value -- the number of attendees of same self-reported gender at the same date/region event as current attendee
- 12) **my_ethnicity:** calculated value -- the number of attendees of same self-reported ethnicity at the same date/region event as current attendee
- 13) **num_participants:** calculated value -- the total number of attendees at the same date/region event as current attendee
- 14) **gender_pct:** calculated from my_gender/num_participants
- 15) **ethnicity_pct:** calculated from my_ethnicity/num_participants
